Harrods, Knightsbridge department store

Case study: Optoma projectors used to create stunning projection mapped Faberge egg for Harrods' shop window

Projection Artworks and JUSTSO created the stunning 360-degree projection mapped Easter Faberge egg for the famous Knightsbridge department store using 16 Optoma projectors.

"We needed projectors that made the challenging blending as easy as possible and Optoma's DLP technology was the best for the job." Emily Gibson, Projection Artworks

PRO SCENE

For demanding professional applications

For nearly two decades Optoma has been one of the few manufacturers to specialise in projection. Systematically Optoma has contributed a product into every new development of projection and has pioneered new award-winning products, targeting a spectrum of applications and environments.

Today, Optoma's ProScene range represents the evolution of projection expertise, designed exclusively for demanding professional applications. The ProScene range provides superb image quality, flexible and reliable projection to facilitate complicated installs, but also offers a high level of service for customers. Optoma's dedicated ProScene experts are available from the initial design and planning of a project to the installation and beyond.

✓ Exhibitions

✓ Stage shows

ProScene Certified Partners

Optoma understands that for ProScene customers, their high specification projector must be of exceptional quality and that the level of support and expertise provided by AV installers and integrators must also be of the highest calibre. To maintain this standard throughout, we have selected only the very best from within the AV industry to become ProScene Certified Partners. These rigorously selected partners understand your specific requirements and perhaps as importantly, they have direct access to the specially-trained Optoma support and service teams. Our dedicated experts are available from the initial design and planning phase of a project, right through to the installation stages and beyond. Through our partners, you will have access to what is probably the most extensive network of service centres across Europe of any projector manufacturer.

Choosing your ProScene projector is just the start. Total support and service excellence are the core of the ProScene ideology, ensuring industry leading dedication to giving you the highest standard of expertise from Optoma and from our certified partners.

Optimised edge blending (available direct from Optoma)

All Optoma signal processors are optimised for use with our ProScene projectors. This significantly reduces the complexity and configuration time required to edge blend multiple ProScene projectors. This is also covered by the industry leading ProScene technical support services should you require assistance with your edge blending project.

Image blending and warping processor GB-200

The Chameleon GB-200 is a fully featured dual-channel image blending and warping processor with multi-layer black level and colour correction.

Edge blending

PRO)SCENE Soluti**o**ns

ProScene Solutions were created by our dedicated team to provide you with tried and tested system solutions for innovative projection applications. These solutions use ProScene projectors and signal processors, enabling us to offer you an unprecedented level of support at every stage of your project. From initial concept and design through to installation and commissioning, ProScene solutions enable you to confidently deliver ambitious solutions to clients quickly, efficiently without any compromise to image quality.

Edge blending - bigger, higher resolution images

Simple blending

Combine up to 16 projectors (4×4) to make extra-large, extra-bright High Definition displays - a single processor serves each projector.

Advanced blending

Leverage the power of your graphics card to generate Ultra High Definition images then blend them together without re-scaling, for truly stunning levels of detail - even onto curved surfaces. A single processor serves up to two projectors simultaneously.

Black-level uplift

When viewing dark content in areas with low ambient lighting, it is often possible to see where the projected images overlap. Advanced black-level adjustment tools in Optoma signal processors can eliminate these distracting issues to provide a seamless end user experience.

Stacking

Brighter images and increased redundancy

Why stack projectors?

When a project calls for even more lumens, the benefits of using multiple stacked projectors quickly become clear. A single projector of equivalent brightness can present problems on many levels:

- Portability smaller, lighter units are significantly easier to transport and install.
- Redundancy if one unit fails, the second unit will still be operational.
- Scalability the more brightness you need, the more projectors you can use.

Optoma is able to provide a range of stacking solutions, tailored to your exact requirements.

Advanced stacking - ultimate clarity

In applications where clarity and sharpness are critical, our advanced solutions give you sub-pixel control of the alignment of both images with up to 289 individual points of adjustment on each projector.

Projection mapping

Creative geometry adjustment and masking

Geometry adjustment

While onsite, it is not always possible to install a projector in the optimum location to get a square image onscreen. Geometry correction greatly increases installation flexibility allowing the image to be easily adjusted to match the environment; while the image rotation function provides a simple way to create portrait projections.

Curved wall correction

Create unusual and engaging installations by projecting onto curved surfaces. To compensate for the image distortion this creates, all Optoma signal processors can be adjusted in both axes simultaneously. Perfect for museums, exhibitions, galleries, restaurants or anyone who is looking for something a little different.

Projection mapping

Take things to the next level using a combination of warping and image masking to create custom projection mapping projects, captivating your audiences like never before.

Simple set-up

Solutions designed and supported by our ProScene team to save you time Supported features by model

LAN control

All Optoma signal processors can be controlled via a network (LAN) connection, keeping you in complete control of your project at all times. The powerful PC tools allow many functions to be fine-tuned with sub-pixel accuracy for truly remarkable results.

Colour and brightness matching

No two projectors are completely identical. When performing complex, or even simple edge-blend projects using multiple projectors, it can be difficult to achieve good results if the images do not match. Optoma ProScene projectors and signal processors provide both colour matching and brightness matching features to ensure perfect results, every time.

8x Optoma EX785 projectors with short throw lenses

AV MEDIA

For all ProScene case studies please visit www.optoma.com

Icons

Full HD 1080p Full HD 1080p

1080p resolution gives you sharp and detailed images from HD content without downscaling or compression: perfect for watching Blu-ray movies, HD broadcasting and playing video games.

HD Readv HD Ready

HD Ready projectors can display 720p/1080i High Definition pictures. You'll still see a big improvement from 720p/1080i HD pictures. though you won't see every last detail from sources such as Blu-ray (1080p) discs.

Full 3D Full 3D

Full 3D projectors can display true 3D content from almost any 3D source, including 3D Blu-ray players, 3D broadcasting and the latest generation games consoles. Support for 144Hz rapid refresh rate provides ultra-smooth flicker free images.

Eco*

Eco+

USB power

Eco+ technology brings together high contrast, improved lamp life and energy saving features that are easy to use while reducing power consumption.

USB power can be used to power a HDMI dongle, such as Google Chromecast or the Optoma WHD200 wireless HDMI device.

Speakers

Built-in speakers provide exceptional sound guality and are easy to set up without the need for costly external speakers.

Vertical lens shift

¢

UST

Vertical lens shift gives you the ability to move the projected image up or down, while keeping the projector stationary. This makes it easier to position the projector in your room and enables a wider range of screen size options.

Full lens shift

Full lens shift gives you the ability to move the projected image up or down and left or right. while keeping the projector stationary. This makes it easier to position the projector in your room and enables a wider range of screen size options.

Media player

A handy integrated media player means you can use the projector as a stand-alone device, retrieving content from the internal memory. USB stick or a memory card.

Ultra short throw

An ultra short throw lens produces an impressive image greater than 100 inches from less than a metre away. This means you can place the projector closer to the wall, reducing shadows so vou can present with ease: perfect for interactive applications.

TouchBeam interactive technology

Optoma's finger-touch technology allows several people to work simultaneously on the projected screen without using a pen. TouchBeam makes it easy to open documents or web browsers and draw, annotate, zoom and rotate images on the projected image.

Laser technology

Laser technology combines the benefits of brilliant colours, higher efficiency and brightness.

*MHL MHL®

Turn your projector into a smart display by connecting a smartphone or tablet with a single cable using MHL to play games, stream videos and share photos on the big screen.

UNDBT HDBaseT

Simplify installation by transmitting uncompressed HD video, audio, Ethernet and control commands using a standard LAN cable of up to 100m.

Key definitions

All Optoma projectors use DLP® technology, pioneered by Texas Instruments. This technology uses millions of mirrors to produce high quality images and ensures the projectors do not suffer colour degradation over time.

For more information on DLP visit

www.optomaeurope.com/projectortechnology/DLP

Resolution

A projector's native resolution is the number of pixels that it has available to create an image. The greater the resolution of a projector. the greater the detail and sharpness of the projected image.

Brightness

Brightness is the light output of the projector. The brightness rating (ANSI lumen or LED brightness) is a measurement of the light energy being generated by the projector itself.

Contrast

Contrast is the difference between the brightest and darkest parts in an image. A high contrast is particularly important for home projectors as it produces a picture with a deeper black level and clearly defined shadow detail.

A projector's aspect ratio refers to the ratio between its width and height. For example, a 4:3 display produces an image that is more square, where a 16:9 ratio produces an image that is more rectangular in shape. The most common video projector aspect ratios are 4:3 (XGA and SXGA), 16:10 (WXGA and WUXGA)

and 16:9 (standard HDTV. 1080p).

Throw ratio

Aspect ratio

Throw ratio is the ratio between the projection distance and image width. For example, a throw ratio of 2:1 means to achieve every unit of screen width requires 2 units of projection distance. Normally guoted as a range as most projectors have a zoom facility.

MHL, Mobile High-Definition Link and the MHL logo are trademarks or registered trademarks of the MHL, LLC. HDBaseT Alliance logo are trademarks of the HDBaseT Alliance. 'Brightness and lifetime will vary depending on selected projector mode, environmental conditions and usage. As is common with all projectors, brightness will decrease over the lifetime. ²Maximum light source lifetime achieved through testing will vary according to operational use and environmental conditions. ³The quoted noise level is based on testing and will vary according to operational use and environmental conditions. Errors and omissions excepted, all specifications are subject to change without notice. All images are for representation purposes only and may be simulated.

Keystone correction

Keystone correction is performed digitally before the image passes through the lens. It can be used to manipulate the projected image vertically and/or horizontally so that you can get it as close to an even rectangle as possible.

Lens shift

Lens shift gives you the ability to move the projected image up or down and left or right, while keeping the projector stationary. This makes it easier to position the projector in your room and enables a wider range of screen size options.
